

3DVista Custom Tools

Every built tool, its status, and where it lives

These are .jsx files, not PDFs — they belong in the same Project Knowledge folder as your PDFs, just a different file type. Place all of these in **Equipment & Production** unless noted otherwise below.

Fully Functional — Use As-Is

Tool	What It Does
mp-productions-proposal-builder.jsx <i>(goes in Website & Systems, not here)</i>	Real quote/proposal tool with working PDF export via Print
portfolio-map-live.jsx	Real, persistent portfolio map — add actual projects with real tour URLs, saved via artifact storage, survives closing and reopening. Supersedes the original portfolio-map.jsx demo version.

Real Code Generators — Output Is Production-Ready, Requires Manual Paste

Tool	Generates
mp-3dvista-element-generator.jsx	CSS/JS for pulse animation, show/hide timing, fade transitions
autohide-demo.jsx	JS for group-based visibility (one element shown hides the rest)
responsive-menu-builder.jsx	HTML/JS for a slide-out navigation menu
callout-generator.jsx	CSS/HTML for directional callouts, 4 styles by 4 directions

How to use these: adjust settings until the preview looks right, click Copy, paste into 3DVista's matching custom CSS or JavaScript action field, publish.

Confirmed 3DVista API Reference (New — Consolidated)

Real API methods confirmed through building 5 different tools. Previously scattered only inside each tool's generated code — now documented as its own reference.

Method	What It Does	Used In
window.player.addListener('onPanoramaChanged', fn)	Fires every time a visitor navigates to a new panorama — the real hook behind every tracker built	universal-tour-tracker-functional.jsx, market-guides-booth-tracker-functional.jsx, market-guides-booth-tracker-fullconfig.jsx, floorplan-pin-tracker.jsx, responsive-menu-builder.jsx
window.player.setCurrentPanorama(name)	Programmatically navigates the tour to a named panorama — used by the menu builder's click actions	responsive-menu-builder.jsx
3DVista's native "Run JavaScript" hotspot action	Confirmed real — this is the actual destination for every generated code snippet in this whole toolkit; found via the "JavaScript API Creator PRO" marketplace listing	All code-generator tools

Retrofitted With Real 3DVista API Calls

Tool	Real Hook Used
universal-tour-tracker-functional.jsx	window.player.addListener('onPanoramaChanged') — fires on real navigation, not clicks
voice-nav-assistant.jsx	Real browser Speech Recognition API — already fully functional as built
market-guides-booth-tracker-functional.jsx	Same onPanoramaChanged pattern — panorama-name config only
market-guides-booth-tracker-fullconfig.jsx	USE THIS ONE — same real wiring, plus full rename/add/remove config matching the Universal Tracker
deal-hotspot-functional.jsx	USE THIS ONE — real fixed-end-time countdown (not just elapsed-since-load), editable deal name/prices, real Shopify URL field

Superseded — Do Not Use

Old Tool	Replaced By

market-guides-booth-tracker.jsx	market-guides-booth-tracker-fullconfig.jsx
deal-hotspot-prototype.jsx	deal-hotspot-functional.jsx
checkpoint-tracker-prototype.jsx	universal-tour-tracker-functional.jsx

Needs a Real 3D Model — Logic Works, Asset Doesn't Exist Yet

Tool	What's Missing
vehicle-configurator-demo.jsx, boat-configurator-demo.jsx	Placeholder geometry only — needs a real GLB/GLTF model (purchased or Metashape-scanned) swapped in
